

Ahmed Muhammed

Software Developer | Laravel Backend developer

+905050537022 | AhmedMuhammed0031@gmail.com | Istanbul, Turkey | [LinkedIn](#) | [GitHub](#)

SUMMARY

Backend Developer experienced in building scalable web applications using PHP, Laravel, and MySQL. Skilled in API development, secure transaction workflows, real-time features, and database optimization. Focused on clean, maintainable code and reliable backend systems.

EXPERIENCE

Robolabs Company

Aug 2024 — Sep 2024

Back-End Developer Intern, Istanbul, Turkey

- Assisted in backend development using PHP and Laravel, enhancing application functionality
- Contributed to designing and optimizing MySQL database queries, ensuring smooth data management
- Gained practical experience with Laravel's Eloquent ORM for efficient database handling
- Collaborated with the team to implement core backend concepts like routing, controllers, and database relationships
- Helped improve backend performance and efficiency through process optimization

E-Technologies

2025 — Present

Back End Developer, Istanbul, Turkey

- Designed and developed robust RESTful APIs and backend services using **PHP (Laravel)** to support dynamic web and mobile applications.
- Built efficient, reusable, and scalable backend systems leveraging **Laravel Eloquent ORM** for seamless interaction with **MySQL databases**.
- Developed and maintained modular codebases, adhering to **SOLID principles, design patterns, and Laravel best practices**.
- Collaborated closely with frontend developers, product managers, and QA teams to deliver feature-rich applications on time.
- Implemented authentication (Laravel Sanctum/Passport), authorization (policies, gates), job queues, and event broadcasting for real-time features.
- Ensured application security, performance optimization, and adherence to **RESTful standards**.
- Worked on version control systems (**Git**), participated in Agile development processes (Scrum/Sprint planning), and managed tasks via tools like **Jira/Trello**.

EDUCATION

Zonguldak Bülent Ecevit University , Zonguldak, Turkey - Bachelor, Computer Engineering

2020 — 2024

Acquired a solid foundation in computer science, with a focus on computational theory, algorithms, data structures, digital system design, database management, and advanced mathematics, including statistics and calculus.

PROJECTS

Socialze X, [Link](#)

Jan 2025 — Present

- Developed a social media platform with user authentication, profile management, and CRUD functionalities for posts (text and images), likes, and comments.
- Built a friend request system with the ability to send, accept, decline, unfriend, and view friends, along with a timeline to view posts.
- Implemented Eloquent ORM for efficient database management and relationship handling.

Rightgive, [Link](#)

Feb 2025 — Dec 2025

- Designed and developed scalable backend architecture using Laravel (PHP).
- Implemented secure Stripe payment integration supporting one-time and recurring donations with proper validation, webhook handling, and transaction logging.
- Built and maintained RESTful APIs for frontend and dashboard consumption.
- Developed real-time features (notifications, updates) using WebSockets with Pusher and Firebase.
- Built backend logic for the admin dashboard, including campaign management, donation tracking, and reporting.
- Optimized database queries and improved performance for high-volume donation transactions.

SKILLS

Frontend: : HTML, CSS, Javascript, Livewire, Blade Template

Backend: : PHP, Laravel, Eloquent ORM

Databases & Tools: : SQL, MySQL, PostgreSQL, Git, Github, OOP, API

Languages : English, Turkish, Arabic
